

Solve each problem.

1) $\frac{7}{9} - \frac{3}{4} =$

2) $\frac{2}{3} + \frac{1}{9} =$

3) $\frac{1}{2} - \frac{2}{5} =$

4) $\frac{1}{2} + \frac{1}{6} =$

5) $\frac{2}{6} - \frac{1}{3} =$

6) $\frac{4}{7} + \frac{3}{6} =$

7) $\frac{4}{5} - \frac{1}{2} =$

8) $\frac{8}{9} + \frac{5}{7} =$

9) $\frac{5}{7} - \frac{1}{2} =$

10) $\frac{5}{6} + \frac{1}{2} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{7}{9} - \frac{3}{4} = \frac{28}{36} - \frac{27}{36} = \frac{1}{36}$

2) $\frac{2}{3} + \frac{1}{9} = \frac{18}{27} + \frac{3}{27} = \frac{21}{27}$

3) $\frac{1}{2} - \frac{2}{5} = \frac{5}{10} - \frac{4}{10} = \frac{1}{10}$

4) $\frac{1}{2} + \frac{1}{6} = \frac{6}{12} + \frac{2}{12} = \frac{8}{12}$

5) $\frac{2}{6} - \frac{1}{3} = \frac{6}{18} - \frac{6}{18} = \frac{0}{18}$

6) $\frac{4}{7} + \frac{3}{6} = \frac{24}{42} + \frac{21}{42} = \frac{45}{42}$

7) $\frac{4}{5} - \frac{1}{2} = \frac{8}{10} - \frac{5}{10} = \frac{3}{10}$

8) $\frac{8}{9} + \frac{5}{7} = \frac{56}{63} + \frac{45}{63} = \frac{101}{63}$

9) $\frac{5}{7} - \frac{1}{2} = \frac{10}{14} - \frac{7}{14} = \frac{3}{14}$

10) $\frac{5}{6} + \frac{1}{2} = \frac{10}{12} + \frac{6}{12} = \frac{16}{12}$

Answers

1. $\frac{1}{36}$
2. $\frac{21}{27}$
3. $\frac{1}{10}$
4. $\frac{8}{12}$
5. $\frac{0}{18}$
6. $\frac{45}{42}$
7. $\frac{3}{10}$
8. $\frac{101}{63}$
9. $\frac{3}{14}$
10. $\frac{16}{12}$
