## MATH INQUIRY!!!

How can you prove the following using pictures and words but not multiplication or division facts?
-SHow that 36 is a common multiple of 3 and 6
-If 60 is divisible by 2 and 3 it must be divisible by 6
-If 15 is a factor of a number so is 5
-45 is a common multiple of 5 and 9

-36 is a common multiple of 3 and 6

$$
\begin{aligned}
& \text { 000 } \\
& 000 \\
& 000 \\
& 000 \\
& 000 \\
& 000 \\
& 000 \\
& 000 \\
& 000 \\
& 6 \text { groups of } \\
& 3 \text { is } 18
\end{aligned}
$$

-If 60 is divisible by 2 and 3 it must be divisible by 6

60 is 10 groups of 6 and each goup of 6 can be divided into groups of 2 and 3
-If 15 is a factor of a number so is 5

$$
\begin{array}{cc}
00000 & 15 \text { is } 3 \text { groups } \\
00000 & \text { of } 5 \text { so all } \\
00000 & \text { groups of } 15 \\
& \text { will he divisible by }
\end{array}
$$

-45 is a common multiple of 5 and 9
